

How to Dissect a Flower

What you will need:

- A single flower you can find in your backyard or neighborhood (you don't want to take too many because the pollinators need them)
- Scissors or Scalpel
- Tweezers
- Parental supervision

Dissection Procedure:

1. Use tweezers and scissors (with adult help) to carefully pull apart the pieces of the flower
2. See if you can identify the different parts of the flower, based on the diagram below.
